Controls and Electric Motor Company Awarded an ISO 9001:2008 Management System Certificate

Controls and Electric Motor Company (CEMCO) is pleased to announce it has been awarded the ISO 9001:2008 Management System certificate by SAI Global for both the design and manufacture of electric motors, drives, and related components. CEMCO provides authorized service and maintenance schedules for complex manufacturing equipment, maintaining the largest inventory of belts, drives motors and controls in the Four-State region.

ISO certification is based on quality management principles including strong customer focus, motivation and implication of top management, the process approach, and continual improvement and reviews. By meeting the extensive criteria for these standards, the company affirms its ability to consistently deliver effective quality management systems, comply with security requirements, and drive continuous improvements to products, services, and internal processes.

“We are proud of our entire team and their dedication and commitment to our customers. Their ability to adopt these processes and attain the ISO 9001 certification speaks directly to their integrity” says Gene Busby, Vice President and Co-Owner. “This certification validates our commitment to customer service and excellence. Our culture has always been about customer-focused decision making. By focusing on our own efficiencies and process improvements will add real value to our customers and insure accountability for all levels of our organization. ISO 9001 certification reflects our commitment to quality and dedication to our customers and suppliers.”

The ISO 9001:2008 is obtained through thorough, external audits performed by an independent accredited registrar company. The certification recognizes organizations that can enhance customer satisfaction through the effective application of a company’s system, including processes for improving the system and assuring compliance with various regulations.

Companies that achieve management system certification to ISO 9001:2008 have demonstrated effective implementation of documentation and records management, the company’s commitment to their customers, establishment of clear policy, good planning and implementation, good resource management, efficient process control, measurement and analysis.

[About Controls and Electric Motor Company](#)

Controls and Electric Motor Company (CEMCO) was founded January 3, 1983 by Wes Gilbreath on the simple premise of stewardship: Help manufacturing and agricultural customers extend equipment life through preventive maintenance, repairs and solving operational problems. Our company provides authorized service and maintenance schedules for complex manufacturing equipment, maintaining the largest inventory of belts, drives motors and controls in the Four-State region. Wes co-owns the business with his son, Eric Gilbreath, and Gene Busby. They have worked together building the business in Joplin, Missouri and the surrounding areas. In a short amount of time, our company grew into a multi-million dollar sales and service business with many more employees. We are still a family-owned and operated business. We offer outstanding service at a fair price.
